

Current internet plan not the right fit?

At WIN, we'll make sure your plan is the perfect fit!

"We use Wi-Fi a lot! Our kids both have Chromebooks from school, and we watch a lot of TV shows online."

100Mbps

100Mbps with the Gigacenter Wi-Fi Package might be just the ticket!

"We currently have DSL with your competitor and decided to subscribe to an online TV service."

Although we are paying for 7Mbps, we usually get about 3Mbps on a speed test. Because of this our online TV buffers constantly"

25Mbps

With fiber broadband, you typically get the speeds you are paying for. Going with a 25Mbps plan with WIN should take care of your buffering issues.

"My kids and husband are big gamers and play a lot of games online. I work from home and need to upload large files fairly often. This takes forever when they are on the internet at the same time!"

250Mbps

Gaming and uploading files are activities that can take up a lot of bandwidth. Using a speed like 250Mbps paired with the Gigacenter Wi-Fi Package should alleviate your frustrations while working & playing!

"My wife and I are the only ones using the internet in our house. We have increased our speed to 100Mbps and are still having Wi-Fi issues"

25Mbps

The problem may actually be your router. By going with a lower speed, like 25Mbps, and adding the Gigacenter Wi-Fi Package, your experience should greatly improve as the Gigacenter is designed specifically to handle multiple devices simultaneously and provide better Wi-Fi coverage in your home.

Local Choice. Local Service.
