

NETWORK MANAGEMENT POLICY

Breda Telephone Corp. and its affiliate companies d.b.a Western Iowa Networks (“WIN”) (Company) commits to using reasonable network management practices, and to manage its network and provide access in accordance with the Federal Communications Commission’s (FCC’s) rules. The FCC prohibits providers of Broadband Internet Access Service (BIAS) from engaging in blocking, throttling, and paid prioritization of lawful content, applications, services, or non-harmful devices, subject to reasonable network management. Reasonable network management includes avoiding congestion, combating harmful illegal content, and responding to legitimate safety and security issues. Company’s policies regarding network management practices are outlined herein in an effort to inform you of Company’s network performance, management practices, and terms of service.

Network Management Practices

Congestion Management. Congestion due to malfunctioning hardware and/or software will be remedied as quickly as network engineers can diagnose and identify the offending hardware / software. Congestion due to malice will be remedied using any technique available, including protocol-aware filtering and rate-limiting, to control and limit the offending source. Company may seek criminal charges against those who inflict network malice. Company may also attempt to recover costs incurred from network malice.

User-Based Practices. Company does not target specific users or user groups for congestion management.

Blocking or Throttling. Company reserves the right to disconnect or limit any account access to the Internet that in the opinion of its system administrator is a threat to the security or lawful operation of the Internet service or the service’s software and/or hardware or that repeatedly violates the terms of its Acceptable Use Policy (AUP) or other terms of service. Company reserves the right, but does not assume the responsibility, to block or limit access to content that violates its AUP. Company will not unjustly or unreasonably block access to lawful content, applications, services or non-harmful devices, subject to reasonable network management. Company also will not unjustly or unreasonably (other than reasonable network management elsewhere disclosed) degrade or impair access to lawful Internet traffic based on content, application, service, user, or use of non-harmful devices, including a description of what is throttled and when.

Affiliated or Paid Prioritization. Company does not unjustly or unreasonably favor some traffic over other traffic including through use of techniques such as traffic shaping, prioritization, or resource reservation, to benefit an affiliate or in exchange for consideration, monetary or other benefit.

Zero Rating. Company does not engage in zero rating.

Application-Specific Behavior. Company does not make use of any application-specific network management practices. Company does not modify protocol fields in ways not prescribed by the protocol standard. Company does not inhibit or favor certain applications or classes of applications. Company does not block or rate-control specific protocols or protocol ports, except for malformed or non-standard protocol traffic as identified by Company. Company reserves the right to block outbound Simple Mail Transfer Protocol (SMTP) from residential IP addresses to protect against unsolicited commercial email (UCE) or spam.

Device Attachment Rules. Devices connecting to Company's network must conform to general public standards and be non-harmful to the network.

Security. Company provides its own methods to secure and protect its Internet service and network. Such action is not a substitute for the customer providing his/her own security or protection for your own software, devices, network or data. Company specifically disclaims any liability for any breach of security or any harm to customer's computing system while connected to Company's Internet service.

Performance Characteristics

Service Description. The advertised speed of Company's Internet service is the maximum bandwidth throughput that is available and achievable with the technology utilized by Company. Advertised speeds/latencies can be found in our Broadband Labels located at westianet.com. Company's network is 100% Fiber-To-The-Premise and provide up to a 1 gigabit connection speeds.

Impact of Non-BIAS Data Services. Company offers non-BIAS data services such as VoIP, IP Video, and Business Data Services\ VOIP, IP Video and Business Data Services are not given any special priority over other available bandwidth.
